For The Rising Math Olympians: The Ultimate Handbook For Winning Math Competitions In Elementary And Middle School

Synopsis

For the Rising Math Olympians contains over 500 examples and brand-new problems in Number Theory, Algebra, Counting & Probability, and Geometry that are frequently tested in math competitions. Each chapter contains concepts with detailed explanations, examples with step-by-step solutions, and review problems to reinforce the students' understanding. This book is written for beginning mathletes who are interested in learning advanced problem solving and critical thinking skills in preparation for elementary and middle school math competitions. For the past three years, Jesse has served as an assistant coach for his former middle school math team and the curriculum director for the Maui Math Circle. In 2016, three of his students finished in the top 10 in the Hawaii State Mathcounts Competition. This book consists of the top 20 math concepts that he used to train his students. Customer Reviews

This book covers many types of problems found in middle school math competitions. Its explanations are clear, and it has several examples on each topic. Each of the 20 chapters has 20 problems for students to work through, and each problem has a fully worked-out solution in the answer key. It would have been helpful if the author had included more explanations as to why the various formulas and techniques work. Too many topics are presented as, "here's the formula; let's see some examples." That being said, students can still benefit greatly by working through the examples and practice problems. I look forward to seeing further books from Mr. Doan.
